

Document Analysis & Migration Readiness Tool

Hi there 🙌

This take-home assignment is designed to evaluate your ability to handle documentation analysis, migration readiness assessment, and automation, which are key aspects of the Migration Specialist role.

Please review the task details carefully. If you have any questions, feel free to reach out.

Timeline: Please submit your completed solution within **2–3 days** of receiving this assignment.

Problem Statement

As a Migration Specialist, one of your core responsibilities is to analyse and prepare documentation for migration into platforms like **Document360**.

In this task, you will build an **automation tool** that processes:

- Microsoft Word documents (.docx)
- PDF documents (.pdf)

Your tool should extract key metrics and generate an **AI-driven complexity and readiness analysis**.

This simulates real-world scenarios such as:

- Content auditing
- Documentation quality analysis
- Migration readiness evaluation

Objective

Develop a tool that:

- Parses Word and PDF documents
- Extracts structural and content-level attributes
- Calculates key document metrics (pages, words, sections, etc.)
- Uses AI to assess content complexity and readability
- Outputs results in a structured and actionable format

Task & Expected Outcome

1. Document Parsing

Build a system capable of:

- Extracting text from .docx and .pdf files
- Identifying structure (headings, paragraphs, sections where applicable)
- Handling edge cases (empty, inconsistent, or large documents)

2. Metrics Extraction

Your tool should generate:

- Total pages
- Word count
- Paragraph count
- Heading/section count
- Average words per paragraph
- Any additional relevant insights for migration (bonus)

3. AI-Based Analysis

Incorporate AI to evaluate:

- Readability level (Easy / Medium / Complex)
- Content clarity and consistency
- Structural quality (well-organized vs. fragmented)
- Migration readiness (e.g., clean, reusable, requires restructuring)
- Suggestions for improving content before migration

4. Output Format

Present the results in a structured and usable format, such as:

- JSON output
- Summary report
- Optional dashboard or UI

The output should help answer:

“Is this document ready for migration? If not, what needs improvement?”

Deliverables

- Working automation tool/application
- Clean and well-structured source code

- README with:
 - Setup instructions
 - Tools/libraries used
 - Steps to run the project
- Sample input and output

Evaluation Criteria

Your submission will be evaluated based on:

- Accuracy of document parsing
- Relevance of extracted metrics for migration
- Quality of AI-driven insights
- Practical usefulness of migration readiness analysis
- Code quality and maintainability
- Handling of real-world document scenarios

We're looking forward to seeing how you approach **content analysis, automation, and migration readiness evaluation** in a practical, real-world context. 🚀
